BRIJESH RATHOD

Team Lead | Senior Software Quality & Automation Engineer

Warsaw, Poland | +48 579 157 645 | bgrathod00@gmail.com
LinkedIn: linkedin.com/in/rbrijesh07 | GitHub: github.com/brathod1432

PROFESSIONAL SUMMARY

- QA Team Lead and Senior Software Quality & Automation Engineer with 6+ years of experience in software testing, quality engineering, test automation and enterprise software delivery.
- Experienced in leading engineering teams, recruiting and onboarding team members, assigning feature ownership, managing delivery priorities and supporting professional development through mentoring and technical guidance.
- Strong background in test strategy, risk-based testing, manual and automated validation, REST API testing, system and integration testing, regression strategy, release readiness and defect lifecycle management.
- Proven ability to lead multiple enterprise features and quality workstreams from requirement analysis and planning through automation implementation, defect resolution, stakeholder reporting and production release.
- Designed scalable Python automation frameworks, Jenkins/Groovy CI/CD pipelines, qTest-integrated reporting workflows and AI-assisted quality-engineering solutions across Linux, VMware ESXi and distributed enterprise environments.
- Strong technical foundation in automation architecture, reusable software components, telemetry, CI/CD, distributed systems, enterprise storage, networking and evidence-driven root-cause investigation.

PROFESSIONAL EXPERIENCE

Dell Technologies | **Senior Software Automation Engineer** | Warsaw, Poland | Jan 2023–Present
QA team leadership, automation strategy and end-to-end enterprise delivery

- Lead day-to-day engineering and quality activities, coordinate workloads and dependencies, assign feature ownership, resolve technical blockers and ensure delivery commitments align with quality and release expectations.
- Support team growth by interviewing engineering candidates, evaluating technical and collaborative capabilities, contributing to hiring decisions and onboarding engineers into project workflows, automation standards and quality practices.
- Mentor engineers through technical guidance, automation and code reviews, problem-solving support, regular feedback, knowledge sharing and continuous-development planning.
- Define testing priorities, automation strategy, quality expectations, delivery plans and risk-based test scope while balancing exploratory and manual validation with scalable automation.
- Designed and developed an enterprise test orchestration framework that dynamically selected sanity, regression or full-regression coverage based on software version, release type, feature tags, technical risk and upgrade scope.
- Designed scalable Python-based API, system, integration and performance-validation frameworks supporting Linux, VMware ESXi, enterprise storage, networking and clustered infrastructure environments.
- Developed reusable automation infrastructure and shared Python libraries used across multiple engineering teams while maintaining compatibility between enterprise products, services and features.
- Reduced end-to-end regression execution from approximately four weeks to five working days through automated pipeline orchestration, risk-based test selection, parallel execution and infrastructure-aware scheduling.
- Designed and implemented a fully integrated Jenkins CI/CD architecture using Groovy scripts and Jenkinsfiles, enabling GitHub changes to automatically create or trigger pipelines and execute standardized validation workflows across enterprise projects.
- Designed and implemented a fully integrated Jenkins CI/CD architecture using Groovy scripts and Jenkinsfiles, enabling GitHub changes to automatically create or trigger pipelines and execute standardized validation workflows across enterprise projects.
- Integrated automated execution workflows with qTest to synchronize test progress, execution results and defect information, enabling reliable management reporting and real-time visibility into regression status.
- Designed an AI-assisted multi-agent quality workflow integrating qTest, Jenkins and Python automation to support execution planning, test-code maintenance, build triggering, regression selection, failure retries, result synchronization and engineer notifications.
- Designed modular Python libraries and reusable framework components using abstraction layers, configuration-driven execution and object-oriented design principles.
- Built centralised telemetry, logging, health monitoring, quality reporting, retry mechanisms and failure-diagnostic components supporting test observability and multi-layer defect investigation.
- Led system-level, integration, regression, performance, resiliency and end-to-end validation across Linux, VMware ESXi, Fibre Channel, iSCSI, NVMe, networking and clustered enterprise platforms.
- Lead end-to-end quality delivery for multiple enterprise features, coordinating requirement analysis, engineer assignments, test strategy, automation implementation, validation, defect resolution, stakeholder reporting and production release readiness.
- Validated REST APIs and distributed enterprise services and led defect investigation across Linux, virtualisation, networking and storage using telemetry, controlled reproduction and root-cause analysis.

- Collaborated with developers, product stakeholders and architects to clarify requirements, define acceptance criteria, improve testability and support risk-informed release decisions.
- Provided technical guidance and code-quality oversight while improving framework scalability through reviews, refactoring, reusable engineering standards and automation architecture enhancements.
- Improved automation coverage, execution reliability and engineering productivity through framework refactoring, bottleneck analysis, reusable tooling and preventive quality improvements.

Testronic | **Senior Quality Assurance Technician** | Warsaw, Poland | Mar 2022–Jan 2023

- Progressed from Junior Quality Assurance Technician and expanded ownership of test planning, test execution, defect lifecycle management and release readiness.
- Designed functional, regression, smoke, sanity, exploratory and manual test coverage from product requirements using Jira, Confluence, qTest and TestRail.
- Documented UI/UX, engineering, QA and design defects with reproducible steps, expected and actual results, supporting evidence and retest outcomes.
- Investigated customer-reported issues, supported root-cause analysis and coordinated defect validation with engineering, design and QA teams.

Testronic | **Junior Functionality Quality Assurance Technician** | Warsaw, Poland | Mar 2020–Feb 2022

- Executed functional, regression, smoke, sanity and exploratory testing and maintained requirement-based test cases.
- Reported and tracked software defects in Jira, verified fixes and collaborated with engineering, design and QA teams throughout the defect lifecycle.
- Applied selective automation and reusable test practices to reduce repetitive manual effort where appropriate.

Fiverr | **Freelance Software and Web Tester | Remote | Mar 2020–Feb 2022**

- Performed game, web UI and web application testing covering functionality, usability, user flows, interface behavior and product quality.
- Reported defects and usability issues with clear reproduction steps, expected and actual behavior and supporting evidence.

TECHNICAL SKILLS

QA Leadership & People Management: QA Team Leadership, People Management, Hiring, Technical Interviews, Candidate Evaluation, Engineer Onboarding, Team Building, Mentoring, Coaching, Knowledge Sharing, Technical Guidance, Workload Allocation, Capacity Planning, Feature Assignment, Priority Management, Delivery Management, Blocker Resolution, Team Development, Conflict Resolution, Stakeholder Management and Cross-Functional Coordination

Quality Strategy & Delivery: Test Strategy, Automation Strategy, Software Verification Methodology, Verification Planning, Manual and Automated Testing, Risk-Based Testing, Test Planning, Requirements Analysis, Test Requirements Definition, Test Scope Definition, Acceptance Criteria, Quality Standards, Quality Gates, Functional Testing, Integration Testing, System Testing, Regression Testing, Regression Strategy, End-to-End Testing, Smoke Testing, Sanity Testing, Exploratory Testing, Scenario-Based Testing, Performance Validation, Resiliency Testing, Release Validation, Release Readiness, Defect Lifecycle Management, Quality Metrics, Test Reporting, Risk Communication, Design for Testability, End-to-End Quality Ownership and Continuous Improvement

Programming, Automation & API Testing: Python 3, Bash, Shell Scripting, Groovy, C++, Java 8, Pytest, REST API Testing and Validation, API Design, Automation Framework Development, Verification Framework Development, Test Automation, Object-Oriented Programming, Modular Framework Development, Reusable Software Libraries, Configuration-Driven Automation, Reusable Test Components, Test Data Management, Structured Logging, Telemetry, Error Handling, Retry Mechanisms, Secure Configuration Management, Secure Environment Variables, JSON, YAML and XML

CI/CD, Test Management & Development Tools: Jenkins, Groovy, Jenkinsfile, Pipeline-as-Code, CI/CD, GitHub-Triggered Pipelines, Build Automation, Deployment Automation, Release Pipelines, Regression Pipelines, Automated Quality Gates, Execution Dashboards, qTest Integration, Jira, Confluence, qTest, TestRail, Selenium, Git, GitHub, GitLab, Agile, Scrum, Backlog Refinement and Sprint Planning

Distributed Systems & Troubleshooting: Linux, Red Hat Enterprise Linux, CentOS, SUSE, Ubuntu, VMware ESXi, Docker, Virtual Machines, Distributed Systems, REST Services, Client-Service Architecture, Enterprise Storage, Distributed Storage, Storage Appliances, Hosts, Clusters, Cluster Management, Fibre Channel, iSCSI, NVMe, Ethernet, TCP/IP, Storage Networking, Infrastructure Validation, System Configuration, Telemetry Analysis, Log Analysis, Performance Analysis, Controlled Reproduction, Root-Cause Analysis, OS Troubleshooting and Network Troubleshooting

AI Quality Engineering & Intelligent Automation: AI-Assisted Software Engineering, AI-Assisted Test Design, AI-Assisted Test Maintenance, AI System Evaluation, Non-Deterministic Output Testing, LLM Integration, NVIDIA AI Endpoints, Model Evaluation, Model Benchmarking, Automated Capability Assessment, Model Health Validation, Intelligent Routing, Fallback Strategies, Edge-Case Analysis, Failure-Mode Testing, Grounded-Response Evaluation, Hallucination Detection, Human-in-the-Loop Validation, Regression Baselines, AI Risk Analysis, Response-Quality Evaluation, AI Agents, Multi-Agent Systems, Agent Orchestration, Automated Failure Recovery, Workflow Automation and AI Observability

Engineering & Technical Foundations: MATLAB, Simulink, ANSYS Workbench, AutoCAD, Autodesk Inventor, Autodesk Fusion, Autodesk EAGLE, Embedded Systems, Robotics, Artificial Intelligence, Machine Learning, Control Systems, Sensors, Technical Design, 3D CAD, Modelling and Simulation, Mechatronics, Diagnostics, Metrology, Photonics and Machine Dynamics

Documentation & Data Analysis: Technical Documentation, Technical Reporting, Quality Reporting, Data Analysis, Data Processing, Microsoft Excel, Microsoft PowerPoint, Microsoft Word and Microsoft Office

Mobile, Web & Data Testing: Mobile Application Testing, iOS Testing, Android Testing, Web Application Testing, Playwright, Appium, TypeScript, MySQL, MongoDB, SQL, NoSQL, Postman and Kanban

EDUCATION

M.Sc. in Robotics

- Warsaw University of Technology | Warsaw, Poland
- Relevant focus: Artificial Intelligence, Machine Learning, Software Engineering, Embedded Systems, Control Systems, Optimization, Computer Vision, Sensors, Robot Kinematics, Kalman Filtering, Fuzzy Logic, Autonomous Systems and AI Planning.

B.Sc. in Mechatronics Engineering (Specialized in Machine Devices and Systems)

- Warsaw University of Technology | Warsaw, Poland | Oct 2020–Nov 2023
- Relevant focus: Mechatronic systems, industrial diagnostics, metrology, quality engineering, precision and electronic devices, photonics, machine dynamics, modelling and simulation, technical design and 3D CAD.

Foundation Year

- Warsaw University of Technology | Warsaw, Poland | Oct 2019–Sep 2020
- Relevant focus: Mathematics, Physics and Chemistry.

CERTIFICATIONS/PROFESSIONAL DEVELOPMENT

- Ongoing professional development in QA leadership, people management, AI-assisted software engineering, multi-agent systems, model evaluation, test automation strategy, automation architecture, CI/CD, DevOps engineering, Linux systems, Kubernetes, AI infrastructure, platform engineering, software architecture and robotics.

PROJECTS

NVIDIA Model Bridge | Python 3.11, REST APIs, Multi-Model Evaluation

- Designed a modular Python platform for executing and evaluating inference requests across NVIDIA-hosted and OpenAI-compatible endpoints.
- Developed reusable components for latency measurement, workload comparison, model benchmarking, health monitoring and performance reporting.
- Automated comparative testing across multiple models, workloads and endpoint configurations using structured logging and standardized provider interfaces.

AI-Control-Core / Reusable Agent Skills | Developer Automation

- Designed a modular Python platform supporting configurable execution workflows, distributed task orchestration and infrastructure automation.
- Developed reusable components supporting parallel and sequential processing, retries, health validation, structured logging and execution reporting.
- Designed extensible interfaces and configuration-driven pipelines emphasizing scalability, maintainability and controlled workload execution.
- Improved workflow reliability and execution efficiency through task decomposition, reusable abstractions and standardized automation controls.

Trinity Coordinator | Multi-Agent Orchestration, Agent Validation

- Designed a coordinator-led workflow with two specialized agents and builder, reviewer and operator roles selected by task type.
- Planned decomposition, parallel/sequential execution, handoffs, retries, validation, security review, human approval, synthesis and monitoring.

Grounded AI / TruthBench / TruthGuard | Python, AI Evaluation, Guardrails

- Designed an AI-quality workflow for hallucination reduction, grounded-response evaluation, evidence checking and structured reliability reporting.
- Defined repeatable evaluation pipelines, regression baselines, failure classification, benchmark reporting and planned quality dashboards.

Agentic OS with Obsidian and Codex | Local-First AI Architecture

- Planned an Obsidian/Codex workspace integrating MCP servers, multiple LLM backends, NVIDIA endpoints, model routing and controlled tools.
- Defined frontend, orchestration, storage, security, observability and dashboards for agents, workflows, errors, latency, approvals and pipeline health.
